

Finance OS

Your private CFO - User Guide

Personal wealth + Mendtech cash flow in one command centre

Open the app:

<https://mendtech23.github.io/mts-field-app/finance-os/>

1. What Finance OS is

Finance OS is your single financial command centre. It replaces jumping between banking apps, Binance, mutual-fund portals and Zoho to answer one question: how am I doing with money?

Within 30 seconds of opening it you see: total net worth, cash available, investment performance, this month's spending, Mendtech's cash position, upcoming risks, AI recommendations and progress toward your goals.

The golden rule: nothing happens in the background

Finance OS NEVER syncs, polls or fetches anything on its own. Every number updates only when you press the gold Refresh button at the top. One press: live prices are fetched for tracked investments, everything is recalculated, a net-worth snapshot is saved, changes since last time are compared, and fresh insights + an Executive Brief + a health score (0-100) are generated.

Privacy & where data lives

Your data lives ONLY on your phone (or computer) in the browser's local storage. Nothing is uploaded to any server. That also means: use one main device, and take a backup now and then (More -> Export backup).

2. Install it on your phone

1

Open the link

<https://mendtech23.github.io/mts-field-app/finance-os/>

2

Add to Home Screen

Android (Chrome): tap the 3-dot menu -> 'Add to Home screen'. iPhone (Safari): tap Share -> 'Add to Home Screen'.

3

Open it like any app

It gets its own gold-bars icon, launches full screen, and works offline after the first load.

3. First-time setup (10-15 minutes)

The app starts completely empty. The Home screen shows a Welcome card with these same four steps - tap each one:

1

Upload / paste your bank statement

Home -> 'Upload / paste your bank statement' (or the Money tab -> big gold button at the top). See section 4 for exactly how.

2

Add account balances

Add each bank account, cash, credit card (amount owed) and loan (outstanding). These make up your cash and liabilities.

3**Add your investments**

Binance crypto and Indian mutual funds can auto-price on every Refresh; Amana / stocks are manual. See section 5.

4**Set Mendtech cash balance**

Biz tab -> Update balance. Then add outstanding client invoices and upcoming expenses so forecasts and safe-withdrawal work.

Finish by pressing Refresh. From then on, open the app -> press Refresh -> read your brief. That's the whole routine.

4. Uploading bank statements

Where to find it

- **Money tab** -> its the big gold button at the top of the screen.
- **Same button** also on the Home Welcome card while the app is empty.

What you can feed it

- **A CSV file** downloaded from your bank's portal (ENBD: Accounts -> Transactions -> Download -> CSV/Excel).
- **Copy-paste from Excel:** select the rows in Excel, copy, and paste into the text box - tab-separated paste is understood.
- **Copy-paste from the bank website:** copy the transaction rows on screen and paste them in.
- **PDF-only statement?** send the PDF to Claude and ask: 'convert this bank statement to CSV with columns Date, Description, Amount' - then paste the result.

What happens on import

- Date, description and amount columns are detected automatically (debit / credit columns too, and dd/mm/yyyy dates).
- Every line is auto-categorised: Talabat -> Food Delivery, Carrefour/Lulu -> Groceries, ADNOC -> Fuel, DEWA -> Utilities, Netflix -> Subscriptions, salary -> Income, and so on.
- Duplicates are skipped automatically - re-importing the same statement is always safe.

Teaching it your merchants

If something lands in the wrong category, tap the transaction, change the category and Save. Finance OS remembers that merchant and applies your rule to every future import. Your learned rules are listed under More -> Learned merchant rules.

How often?

Import a statement whenever you like - weekly or monthly is plenty. After each import, press Refresh to fold it into your analysis.

5. Investments - what tracks automatically

Add holdings in the Invest tab. Each holding has a 'Value tracking' mode:

Binance / crypto - AUTOMATIC

Choose 'Crypto - live price on Refresh'. Enter the coin (BTC, ETH, SOL...) and the quantity you hold (from your Binance wallet screen). On every Refresh the AED value is fetched live from CoinGecko. Enter each coin as its own holding.

Indian mutual funds - AUTOMATIC

Choose 'Indian mutual fund - live NAV on Refresh'. Enter the AMFI scheme code and your units - both are printed on your CAS statement (the scheme code is also searchable at mfapi.in). On every Refresh the latest NAV is fetched and converted INR -> AED at the live rate. The fund's full name fills in automatically.

Amana / US stocks / gold - MANUAL

There is no free public price feed for these, so choose 'Manual value' and update the current value from the Amana app now and then (tap the holding -> edit -> Save). Everything else - P/L, return %, allocation, best/worst performer - is calculated for you.

Honest limitation

Why not connect Binance / Amana accounts directly? Their account APIs cannot be called safely from an app that runs entirely on your phone - it would require handing your account keys to a server. Quantity-based tracking gives you live values without any account access. If you buy or sell, just update the quantity once.

Also update 'Amount invested' when you top up - that keeps profit/loss and return % accurate. Set goals on the Home tab; your average monthly savings gives each goal an ETA.

6. Biz - Mendtech cash flow

Deliberately simple - it answers: how much cash does the business have, what's coming in, what's going out, how long will it last, and how much can I safely take out?

- **Cash balance:** keep it current whenever money lands or leaves (use '+ Cash in / out').
- **Outstanding client payments:** every unpaid invoice with its due date. Overdue ones are flagged red; 'Mark collected' adds the money to cash in one tap.
- **Upcoming expenses:** salaries, insurance, license renewals... 'Mark paid' deducts them.
- **30/60/90-day forecast:** cash + expected collections - planned expenses in each window.
- **Safe to withdraw:** what you can draw while keeping the larger of 60 days of planned costs or 1.5 months of average burn in reserve.

7. The AI CFO

The CFO tab answers questions from your latest refreshed numbers. It works fully offline. Try:

- How much money do I have?
- Can I afford AED 20,000?
- How much can I withdraw from Mendtech?
- Where did I spend the most?
- Show my subscriptions / unnecessary spending
- Which investment is underperforming?
- What changed since last refresh?
- How close am I to my property goal?

Optional: deeper analysis with Claude

In More -> Assistant you can paste your own Claude API key (from console.anthropic.com). The CFO then sends your question plus a snapshot of your numbers to Claude for free-form analysis. The key is stored only on your device. Without a key, the built-in engine handles everything above.

8. Data safety & housekeeping

- **Backups:** More -> Export backup downloads a single JSON file with everything. Do this monthly and after big imports.
- **Moving devices:** More -> Restore backup loads that file back - use it to move to a new phone.
- **Careful:** clearing the browser's site data erases the app's storage - that's another reason to keep backups.
- **Start over:** More -> Erase everything gives you a clean start.

9. Quick answers

- **App not on my phone?** Nothing pushed it to the phone - open the link once in the browser and 'Add to Home Screen'.
- **Numbers look stale?** Values only change when YOU press Refresh - that's by design.
- **Refresh says prices unavailable?** Live prices need internet; without it, Refresh keeps the last known values and tells you.
- **Made a typo?** Tap any account / holding / invoice / transaction to edit or delete it.
- **What moves the score?** The health score rewards savings rate, a 3-6 month emergency buffer, low debt, diversified investments and business runway.
- **Security?** Everything is on your device; the optional Claude key is yours; no accounts, no tracking, read-only by design - it can never move money.
